

Question 3

Question 3

1 point possible (graded)

After the previous step of the evaluation we are left with:

```
(cond [(< 0 0) "negative"]  
      [(= 0 0) "zero"]  
      [else    "positive"]) → (cond [false "negative"]  
                                     [(= 0 0) "zero"]  
                                     [else    "positive"])
```

What is the next step of the evaluation?

```
(cond [(= 0 0) "zero"]  
      [else    "positive"])
```

```
(cond [false "negative"]  
      [true  "zero"]  
      [else  "positive"])
```

```
"zero"
```

Explanation

Since the value of the question is `false` in the first clause, the next step is to drop the first question-answer pair.
