Question 1

Question 1

1/1 point (graded)

Consider the problem of designing a function called `seat-guaranteed?` that consumes a reservation and returns `true` if the reservation guarantees a seat for dinner in the restaurant.

What is the signature for this function?

`:: Reservation -> Reservation`

`:: Reservation -> Boolean`

`:: Natural -> Boolean`

`:: String -> Boolean`

Explanation

Since the function consumes a reservation and produces a boolean, the signature should be:

`:: Reservation -> Boolean`
