

## Question 6

### Question 6

1 point possible (graded)

What is the value of the `if` expression below?

```
(if (> (string-length "hello") 10)
    "long"
    "short")
```

☐ true

☐ false

☐ "long"

☒ "short" ✓

#### Explanation

The question in the `if` expression is not a value, so we evaluate it and replace it with `false`. Since the question is `false`, we replace the entire `if` expression with the false-answer expression, which is just the value `"short"`.
