Question 5

Question 5

1 point possible (graded)

After the previous step of the evaluation we are left with:

```
(cond [(< 0 0) "negative"]            (cond [false "negative"]
      [(= 0 0) "zero"]          ➡          [(= 0 0) "zero"]
      [else    "positive"])                [else    "positive"])

   ➡   (cond [(= 0 0) "zero"]        ➡    (cond [true "zero"]
             [else    "positive"])             [else    "positive"])
```

What is the next step of the evaluation?

○

```
(cond [true "zero"])
```

○

```
(cond [else "positive"])
```

⦿

```
"zero"
```

✔

Explanation

Since the value of the question is true in the first clause, the next step is to replace the entire cond with the first answer (i.e `"zero"`).
